Drymen is a vibrant rural village with a strong and active community of all ages. The community take pride in the historic character of the village centre, with the square at its heart, and want this to be preserved and enhanced in the future. This is why there is a particular sensitivity about new development in the village.

Drymen struggles with traffic during the summer months, as people flow through to get to Loch Lomond.

Balmaha is a small settlement in a scenic location in an environmentally special setting on the eastern edge of Loch Lomond. During summer months, it can be extremely busy with daytrippers.

The community at Balmaha are concerned about development of holiday accommodation and do not want to see an imbalance created between local inhabitants and transient visitors. There are strong and active tourism based businesses in Balmaha, and there is a feeling that there is potential to manage existing visitor numbers better whilst improving the visitor experience and generating more local income.
What the community said

Key Issues

- Balancing the need to have a sustainable, active community of all ages in the future, necessitating affordability and variety in local housing stock, with the desire to preserve the current feel and character of the village. [Drymen]

- Balancing demand for visitor accommodation with the concern that the local people feel about a potential dominance of visitor accommodation within a small existing community. [Balmaha]

- Regarding facilities for families - the community would like to see better playgrounds and local childcare is needed.

- There is inadequate local provision for public transport.

- Traffic through the village, particularly through the summer months. [Drymen]

- Parking; currently insufficient and causes issues where it is on street and blocks dual flow of traffic on the Main Street. [Drymen]

- The village square; finding a way forward with the scheme for improvement, promoting active and appropriate use of all buildings on it and helping to realise its full potential as the physical heart of the community. [Drymen]

- Visitor orientation, particularly for long distance walkers and those arriving on public transport. [Drymen]

- Access to the loch, both in getting to Balmaha, and then once in Balmaha enjoying the lochside, water based activities and transport links.

- Low cost business space for those who wish to set up local enterprise, supported by appropriate broadband access.

- The need for improved means of getting around on foot and bicycle, within the village and between Drymen and Balmaha.
Visitor Economy Headline Analysis

Current Assets:

Service Centre; Landscape Setting; Tourism Gateway; Rural Character

**Services**
- Hotels
- Guest House and B&Bs
- Self-Catering

- Cycling routes linking Drymen and Loch Lomond/Balmaha
- Campsites
- Walking routes linking Drymen and Loch Lomond/Balmaha
- Village square improvement (Drymen)
- Conservation area renewal (Drymen)
- Toilets
- Parking
- Better signage
Drymen - Spatial Analysis

Traffic pressure on Balmaha Road particularly during summer months as the means of accessing Loch Lomond from the east.

The northern part of the village is predominantly twentieth century housing developments of varying ages. There is a predominance of cul-de-sac type dead ends, which means that this part of the village isn’t very permeable ie. Everyone relies on the main roads to get around even when on foot or bicycle.

The A811 keeps through traffic away from Drymen. This also means that Drymen has to attract people as a destination in itself.

The A811

Stirling Road

Main Street

Viewpoint

High point in village, this edge has high visibility and challenging topography

Village centre around square and on Main Street

Primary school within large green site on north edge of village

Green edge, defined by woodland

Southern approach retains historic village character

Eastern approach is dominated by post-war housing of varying quality

Green space - park, woodland etc.

Village footprint

Primary roads

Shop and business frontages

to Stirling

to Balloch and Glasgow
Drymen - Character

Rural character to eastern approach to village, punctuated by mature trees. Village edge to east is least defined, compared to other approaches and characterised by post war developments of varying quality.

Main Street and south approach to village square, which has generally retained its historic rural character. The ‘Salmon Leap’ gap site is shown to the right.

The historic square is the physical and social heart of the village and is generally well maintained. There are opportunities to improve uses within buildings on the edges of the square to create more activity.

East approach to village square with the village shop and the Drymen Inn providing much of the local activity and pedestrian footfall.

The village square is the centre of the village, and reaching it lets you know that you have arrived in Dymen. The scale of the space and surrounding buildings means it is a pleasant place to be, although there is a dominance of tarmac in the foreground due to a sweep in the bend, meaning it is intimidating to cross on foot.

Residential development to the north of the village, characterised by generous gardens with houses stepped back from a narrow street. This street is the only link to the village centre due to a predominance of cul-de-sac development. There are some issues here with families walking to the primary school alongside traffic.

Images are captured from Google street view © 2013 Google
Balmaha - Spatial Analysis

Wooded hillside, providing backdrop to the village

Walkway along the loch to the north of the village

Balmaha's key asset: the loch

no current access to walk along lochsides south of the village

Visitor attractor and primary service provider, Oak Tree Inn

Key arrival sequence includes open views of the loch

This area is relatively underdeveloped and screened from the road

Small scale housing clusters scattered along road

Village footprint

Green space - park, woodland etc.

Primary roads

Views to the water
Eastern approach to Balmaha has a special quality, with an avenue of mature trees and glimpses of Loch Lomond.

The road through Balmaha is characterised by the loch on the left and the backdrop of the heavily wooded hillside of the Queen Elizabeth Forest Park.

The loch provides a stunning setting and view. However there are few places within Balmaha from which to sit and enjoy the view, or gain public access the water.

Balmaha contains a large carpark, which is a necessity for the visitor numbers during the summer months.
Drymen - Strategic Principles

- Maintain and enhance the character of Drymen as a rural village.
- Prioritise any new growth in a concentric way, so that the village continues to cluster around the ‘heart’ of the village square.
- Strengthen the village centre by making use of gap sites for visitor and business activity in and around the square.
- Any future growth should incorporate interconnected pedestrian routes to the centre of the village to promote walking over car use.
Drymen - Strategic Principles

*Key Initiative*

1. Improve eastern edge of village
2. Prioritise gap site development within village
3. Preserve natural edge

**Growth**

1. Consented schemes
2. Preferred next development - gap site mixed use
3. Response to demand - next most appropriate site
4. Site to be considered as next most appropriate, see below

**Opportunity - for discussion - make more use of showground parking area, to ease summer congestion and link to new/improved path network**

**Core Paths**

- Development - residential (dashed line consented, solid line potential future)
- Development - mixed (solid line potential future)
- Development - visitor economy (attraction, food/drink, accommodation etc.)

The currently designated Quarry Site to the south east of Drymen was not raised during the community engagement process but can still play an important role in developing a major leisure development in the Park. However, it is recognised that this would entail a significant level of investment which may not be immediately forthcoming so its continued allocation for should not be a barrier to smaller scale visitor accommodation in appropriate locations around the village.
The community of Drymen were clear on two of the things that they felt make it a great place. The first was the character of the village, its size and feel, mix of historic and new, all clustered around a village square. The second was the community itself; vibrant, engaged with a mix of all ages. This is supported by a good primary school, facilities at the village hall, hardworking local businesses and the energy of the community.

The key question discussed during the Charrette was how to sustain this life and diversity in the community, whilst maintaining the existing character of the village. Should there be new housing, so as to maintain a mix of types and affordability? If so, how much and where?

The Gartness Road proposal, which has been granted planning permission, includes 36 new homes in total, though this scheme has yet to be implemented. It was the view of the community that this number of new houses, if built out, could have an impact on the village and there’s reluctance to support more in the immediate future.

Small scale organic growth is favoured in the future. This has to be managed with future capacity and investment in local amenities, such as the primary school.

Areas to the east of the village have been identified as possible areas for future growth, as they are considered to have the least impact on the village setting and will achieve the dual purpose of improving the east edge of the village.

new housing should be of appropriate form and scale for Drymen and make use of tree planting and varied building orientation to soften the boundary edge between houses and countryside.
Drymen - Strategic Principles

Existing village layout

Four principal routes meet in the middle at the square. Cul-de-sac type dead ends in existing housing to the north, east and west mean that each residential street is a self contained ‘branch’ off the main routes. This is not in keeping with current guidance on residential design, which promotes permeability and the ability to allow future growth to link into the existing network of routes. The southern approach to the village retains the historic rural character which should be maintained and enhanced.

Potential growth

The main opportunity for growth in terms of what is most appropriate for the landscape and spatial pattern of the village is to the east. This also presents an opportunity to repair this edge by improving the eastern approach to the village and create a joined up approach to future housing phases in the village.
Drymen - Housing Development Context

A note on housing need in Drymen

Facts and figures

Resident population: 681

Age structure:
- Under 16: 15.6%
- 16 to pensionable age: 53.9%
- Pensionable age and over: 30.5%

Average household size: 2.07

Tenure:
- Owner occupied: 74%
- Social rent: 18%
- Private rent: 8%

Social housing

Current total stock: 65 units
Proposed as part of already granted schemes:
- Gartness Road: 10

Stirling Council have an existing waiting list of 20 applicants who identify Drymen as their preferred choice of allocation area. Half of these require a 1 bed home.

Rural Stirling Housing Association have an existing waiting list of 26 applicants with a local connection to Drymen. 16 of these require a 1 bed home.

Private housing

Average purchase price: £333,800 (Scottish average £154,810)
Market Rent levels: £625 - £850 (Scottish average £670)

Population and Households - 2001 Census
Social housing stock - Council and Registered Social Landlord records
Analysis of Private Housing Market (CHMA Datapack 2012 & s1homes.com)
Gathered for the purpose of this document by the Stirling Council with information from RSHA

Currently Consented Development
- Site A: 36 homes, 10 of these to be affordable social rent
- Site B: 3 homes
Drymen - Housing Sites Options Review

A

Encourage development of consented proposals.

Support a series of small scale infills which reinforce Village centre and maintain its historic character.

B

If a further allocation is required then Site B could be considered as it can repair an edge on an important approach.

This would need sensitive landscape screening.

C

Over the longer term Site C could be considered if justified by housing need.

Some of the options discussed during the Charrette - Options A and B were deemed to be preferred with option C raising concern about relocating the community football pitch.
Drymen - Key Initiatives

The square is Drymen's heart, both for the community and for the many visitors who pass through. Lots of hard work has already been undertaken to seek to improve the public realm of the square for the future wellbeing of the village. This proposed initiative is about re-energising that process, and suggesting that there may be ways to achieve important goals with a more achievable budget. The key focus of any improvements should be on this being considered as a conservation project with a key aim of enhancing and maintaining the square's historic character and heritage.

New consistent paving surface to integrate the Square and reduce the dominance of the road

Encourage development of former garage building as a centre for start up for craft based businesses

New surface acts as a differentiation between the existing road surface and reclaims the square as a pedestrian space with limited, managed, parking

Main road narrowed to slow vehicles, allow easier crossing and enhance the heart of the village

New, clearer crossings highlighted through change of material and/or colour to make vehicles more aware of pedestrians
Drymen - Key Initiatives

Moving the Square public realm proposals forward

**Step 1**
Evaluate the cost for the existing scheme - what costs a lot and where can savings be made?

**Step 2**
Examine what it is that needs to be achieved and what the priorities are. Is it that the square should be safe and pedestrian friendly? Can elements of the scheme be progressed more quickly to achieve this immediate goal?

**Step 3**
Look at how the square is used, particularly during the summer. Are there temporary low cost projects that can be initiated with the help of the businesses on the square to create an outdoor social space for the village, both for the community and visitors passing through?

Option A - Lower specification / cost

Ideas ....
New shared surface around square could be buff coloured resin surface or tarmac (as Callander Main Street) to differentiate it from the road. Limited areas of stone paving around the green.

Option B - Higher specification / cost

Ideas ....
All new stone surfaces within the Square, allowing differentiation in colour and texture to the main road.
Drymen - Key Initiatives

Sensitive gap site development is seen as a positive thing by the community in Drymen. Development of the Salmon Leap site has been identified as part of the community’s top ten priorities in the new Community Action Plan.

The Salmon Leap Site
Multi-level mixed use development creating frontage to the Main Street, with for example: one bed flats above (responding the greatest housing need) and workshops below (responding to community need for affordable business space).

The Site North of the Graveyard
Lower level carparking for visitors to Drymen if possible, site levels pose a significant challenge. Residential development with a view to investigating suitable housing typologies to best respond to local need.
Key aims of gap site development:

1. mixed use development that reinforces the centre of the village
2. creation of active frontage onto the Main Street
3. use of gap sites promotes concentric, organic and sustainable growth of the village
Balmaha - Key Initiatives
Balmaha - Key Initiatives

The means of getting to Balmaha needs to become an enjoyable and special experience in itself.

A family day out can include leaving the car south of Drymen, cycling to Balmaha, lunch and activities in Balmaha, cycling back and evening food and drink at Drymen.

The summer traffic congestion experienced by Drymen and Balmaha could be alleviated, to a degree, by encouraging visitors to take different modes of getting to Balmaha and Loch Lomond. A new cycleway and footpath from Drymen and water based transport would enhance the experience for visitors.

1: Promote use of existing established path network
2: Carry out improvements to existing paths to allow biking for all abilities
3: Incorporate a means of experiencing the Endrick mouth National Nature Reserve

The road to Balmaha - a 20-25min cycle or a 1hr 20min walk
Create a feeling of arrival in Balmaha, so that people are encouraged to get out of their cars and can explore.

Make the most of views of the loch and access to the water.

Promote visitor uses that make more of the potential to capture spend, while creating a unique visitor experience.

Allow appropriate residential development to the north of the approach road, maintaining the strong treeline along the road edge, but keep the south clear of development to allow glimpses of the water on approach to Balmaha.
Balmaha - Strategic Principles

- **Key Initiative**
  - Discourage development south of road where it blocks views of loch from approach.

- **Core Paths**
  - Room for expansion of carpark, but only as part of a wider management scheme with impact from extra vehicles assessed.

- Village can accommodate some residential development on north side of road, screened behind tree line.

- **Key Initiative**
  - Improved cycle access from Drymen, route tbc.

- Shut road past junction with road north to Rowardennan to general traffic.

- Develop boat access so more trips can be made to and from Balmaha, from Balloch, Luss, and Rowardennan.

- Pursue possibility for path link to endrick mouth national nature reserve and link back to Drymen (see key initiative).

Reproduced by permission of Ordnance Survey on behalf of HMSO. © Crown copyright and database right 2013. All rights reserved. Ordnance Survey Licence number 100031883.
Access to the west side of Loch Lomond, the generally quieter side of the loch, makes Balmaha an extremely special place in the National Park. It’s challenge is in making the most of its appeal to visitors, whilst managing the impact of existing visitor volume.

There is a clear opportunity, however, to enhance the experience of being in Balmaha.

Balmaha - Key Initiative

Balmaha could be enhanced by a new pier or viewpoint in the bay looking out towards Inchcailloch.
Balmaha - Key Initiative

The experience of enjoying the water’s edge is the primary reason why many people come to spend time in Balmaha.

Balmaha already has a reputation as a great place to spend the day and get some nice food, and this reputation can be enhanced by future initiatives at the water’s edge. The emphasis should not necessarily be about attracting more visitors, but on making the visitor experience higher quality so that it continues to be a special and memorable place in the future.

This also means that the local community can benefit from more income without increasing levels of visitor footfall.

The proposals shown opposite is an outline sketch of what might be, on Balmaha’s waterfront, within the site outlined in purple on the Strategic Principles page. The key thinking behind the approach is that linear buildings oriented at right angles to the waterfront draws the view into the site and the spaces between the buildings, and gable ends provide opportunity for great indoor and outdoor terrace dining spaces. The road could have a shared surface to slow traffic and encourage pedestrian activity and a pier, albeit in this location not suitable for larger boats, would provide opportunity to walk out and fully enjoy the experience of being in Balmaha.

Some ideas mentioned by the community include a smokehouse, restaurant/cafe and micro-brewery. These would be ideal uses for this site.
Tyndrum is a small village that has evolved as a staging post on a confluence of routes that connect central Scotland to the north west coast. Local businesses have capitalised on the large numbers of travellers passing through and it is a recognised place to stop on this key route. It also benefits from a steady flow on long distance walkers on the West Highland Way.

Tyndrum’s setting is much wilder and more rugged than the rest of the Park. It is distinctly Highland in character, surrounded by munros, and receives more extreme weather. The community in the village feel very connected to Crianlarich as one Strathfillan community. However the community does feel remote from other communities in the Park. Access to facilities such as a leisure centre or the High School mean a 50 minute drive to Callander and shopping may mean a 50 minute drive to Oban. This does mean that there is a feel of self-reliance and resilience which is a positive thing for the future of the village.

The proposed Cononish Gold Mine means change for Tyndrum in the future and the community are keen to make the most of this opportunity to stimulate the local economy.
What the community said

Key Issues

- The principal concern was how to make more visitors stop and spend more time and money in the village rather than just passing by on their way to somewhere else.
- The Green Welly Stop captures a significant number of passers by but there is little else for them to do in the village when they stop.
- The environment surrounding the trunk road is inhospitable to pedestrians which discourages people from exploring the village.
- Traffic speeds are too high and crossing the trunk road feels dangerous.
- There are few facilities for families and children.
- The activities in the area are seen to be underutilised and under appreciated by visitors. There is a desire to make Tyndrum more of a destination.
- The Gold Mine is expected to bring jobs and visitors and create a demand for new homes.
- Visitor accommodation is largely focussed on coach tours and single overnight stays from the West Highland Way.
- There is seen to be an urgent need for a new cycle path to Crianlarich for school children and visitors.
- Public transport, principally buses, is considered to be inadequate.
- The trains are underutilised by visitors and the stations feel remote from the village.
- High energy costs are an additional challenge for those living on low incomes in a remote rural location with harsh winters.
Visitor Economy Headline Analysis

Current Situation

Tyndrum Spatial Analysis

The A82 is a trunk road going directly through Tyndrum. This brings people into the town but brings its own problems related to through traffic.

The A85 road to Lochawe and the West coast
Tyndrum Character

Southern approach to Tyndrum along the A82 road from Crianlarich.

Real Food Cafe along the A82 trunk road with carparking and seating outside.

Caravan park entrance with Brodies mini-market with the beautiful backdrop of wooded hills.

Driving through Tyndrum with The Green Welly Stop ahead. The town is very small with low density. Buildings are scattered along the A82 road, usually set back from it.

The Green Welly Stop, a very important services and amenity point on the way up to north and west Scotland or down to the central belt of Scotland.

Approaching Tyndrum from the north along the A82 road opens scenic lush green views toward the Loch Lomond and Trossachs National Park.
The key challenge in Tyndrum is how to make it a place that encourages people to stop and dwell rather than simply pass through or just quickly refuel at the famous Green Welly Stop.

A local hub for the community and visitors that is well connected to an integrated network of roads, railways, cycle paths and footpaths.

- Create focus at the centre, where all routes converge, and main visitor uses are.
- Encourage depositing of car and movement through the village on foot.
- Create more direct connections between the train stations, and the centre of the village.
- Allow pockets of housing around the central village space, and avoid linear ribbon development along the trunk road.
Strategic Principles

- **key initiative**
  - If residential development is required to respond to an identified need, it is suggested that the area to the east of the village should be a priority for phased development to reinforce the existing homes.
  - In terms of landscape impact, this area is sheltered by the community woodland.

- **key initiative**
  - The view from the train station on this side is a key strength for Tyndrum, of the town and the mountains opposite. Development on this side of the watercourse should be discouraged.

- **key initiative**
  - A new approach from the train station would enhance the arrival sequence into the village, and possibly tie in with managed access to the gold mine, with a safe railway crossing.

- **key initiative**
  - This is a key site in the village and offers huge potential to become the centre with a combination of visitor amenity and quality external space.

- **key initiative**
  - Improved access from the train station with a path that weaves through the community woodland.

- **key initiative**
  - New cycleway to Crianlarich (initiative already in progress).

- **tree structure planting**

- **core paths**

- **development - residential**

- **development - visitor economy** (attraction, food/drink, accommodation etc.)
During the Charrette process, three options for the centre of the village were discussed. These options all centred around common themes:

- Creating a sense of a village and a place, rather than a collection of buildings dotted on either side of a trunk road.

- Identifying key sites within the village, that are critical to this feeling of place.

- Looking at arrival sequences, by train and by road.

- Using means to slow traffic that is in keeping with current thinking, a speed limit sign alone is difficult to enforce, but the feeling that you are passing through a place encourages caution and a natural reaction to slow a little.

- Encourage walking within the village, rather than reliance on the car for trips between buildings.
Tyndrum - Development Strategy Options

**Tyndrum - Option B**
- possible residential development options
- continue strategy of defined parking areas that are visible to people passing through, soften with landscape treatment
- improved and more direct links to the train stations
- improved frontage with walkway and planting
- bunkhouse accommodation with active ground floor
- retail/visitor use with active frontage
- defined pedestrian crossings at strategic points
- threshold spaces - change in character so drivers know they are in a village
- new cycle/pedestrian pathway linking Tyndrum with Crianlarich

As Option A but:
- bunkhouse accommodation in village centre to encourage more overnight stays
- new housing land provision to north of village centre to take advantage of elevated, south facing, views and to south west

**Tyndrum - Option C**
- threshold spaces - change in character so drivers know they are in a village
- improved frontage with walkway and planting
- goldmine interpretive visitor facility
- retail/visitor use with active frontage
- defined pedestrian crossings at strategic points
- threshold spaces - change in character so drivers know they are in a village
- new cycle/pedestrian pathway linking Tyndrum with Crianlarich
- possible residential development options

As Option A but:
- village centre focused on Gold Mine related visitor facility
- new green space linking visitor facility to surrounding landscape and forming an arrival space from the new pathway from the south railway station
- new housing land provision only to north of village centre to take advantage of elevated, south facing, views and to keep the important arrival vista clear from the south station
Key Initiatives

These proposals illustrate how Tyndrum can be enhanced by creating a new heart for the village which will give it a stronger identity and a clearly defined centre of gravity to encourage visitors to stop and spend more time there.

A key principle is making the environment around the trunk road more welcoming to encourage pedestrians to get out of their cars and explore the village.

The new centre is linked to new, more direct, pedestrian and cycle connections from the two stations that engage visitors in the Highland landscape to heighten the experience of arrival in a special place.

The southern approach opens up a magnificent view of Tyndrum in its mountain terrain setting whilst the northern approach presents the opportunity of a path through the community woodland. Both routes will bring the visitors right into the heart of the village.
Key Initiatives

- New, direct pathway to railway station linked with cycleway to Crainlarich and West Highland Way
- Tourist Information Centre optimised with craft retail
- Potential Gold Mine Visitor Facility.Orientation point for visitors and departure point for trips to mine
- Village centre enhanced to encourage passing visitors to stop and spend time in Tyndrum
- Sheltered boardwalk frontage to retail and leisure facilities
- If needed, housing expansion to north structured so it can evolve into an integrated network of connected streets rather than cul-de-sacs

- New pathway to railway station
- Village arrival gateway with traffic calming
- The Green Welly
- Real Food Cafe
A short to medium term goal for the village should be improve the environment for pedestrians. This could be achieved by constructing a covered walkway along the west side of the trunk road which would respond to a number of Tyndrum's aspirations for the future:

- It would create a continuous frontage onto the road, in advance of development of the site.
- It would create a sense of arrival into the centre of a village, with the psychological effect of making traffic more aware of people.
- It would encourage pedestrian movement between the businesses in the village.
- With the appropriate design it could be a significant landmark on the West Highland Way and be utilised for outdoor heritage display and visitor orientation.
Key Initiatives

The walkway should be set back from the road, with a green buffer between pedestrians and traffic. Crossings should be located where people naturally want to cross the road. Although this is a trunk road, there are measures that can make the environment more people friendly, in line with the Scottish Government’s ‘Designing Streets’ guidance, acknowledging that Tyndrum needs to feel more like a village and less like a road with a collection of buildings on each side.
Key Initiatives

Although the Gold Mine is not critical to the future of Tyndrum it presents a significant opportunity for the village to become a unique visitor destination and the gateway to the Gold Mine.

The Cononish mine is located near the village, and Tyndrum would be the natural base point from which to explore the story of mining in the area. This could include heritage and information, family based activities and a managed means of walking or getting transport to the mine itself if the opportunity to have on-site visitor interpretation is also realised.

The area already has mining heritage, with a former local lead mine, and there is a wider story to be woven in, with local walking routes in the local landscape.
Key Initiatives

A key priority will be to test the feasibility and potential for a mining heritage centre in the village. The location of a mining heritage centre in the centre of the village can be a key catalyst for moving Tyndrum forward from principally being perceived as a staging post to a visitor destination in its own right and will provide the key connection to the Cononish Goldmine.

There are a number of strong precedents around the world for successful visitor facilities associated with mining which are illustrated below.
Tarbet and Arrochar/Succoth share one vibrant and active community. They are set within the dramatic landscape of west Loch Lomond at the northern tip of Loch Long with dramatic views to the Arrochar Alps to the west.

Both principal villages suffer from the fact that they have become passing through places rather than destinations. Their configuration around trunk roads, the quality of the public realm and the local retail and leisure offer does not encourage visitors to stop.

They are still beautiful places and there is significant potential to be harnessed. This potential is already demonstrated by the recent planning consent for the Ben Arthur resort across the loch. It is critical that the villages, and in particular Arrochar, plays to its inherent strengths and harnesses these qualities for the benefit of the community and the long term wellbeing of the villages.
What the community said

Key Issues

- The three villages benefit from a stunning setting, with the Arrochar Alps, Loch Lomond and Loch Long.

- Arrochar is currently seen as a ‘passing through’ place, it is difficult to stop and spend time. Tarbet has a similar problem, though it does have more opportunity to stop and view the loch.

- Arrochar is missing a centre, which is the focus of community and visitor activity and gives the feeling of arrival into the village.

- The three villages are one community and links that strengthen this relationship are welcome. There is particular desire from families in Arrochar to have a safe route to walk or cycle to school in Tarbet, the road is too dangerous and pavement too narrow.

- The proposed development at Ben Arthur will bring significant change to the area, and there is a desire to make sure that Arrochar sees some benefit from its proximity to such a large visitor destination.

- There is a feeling that enough isn’t made of outdoor activity in the area, and the visitors who come to walk, hike, cycle and dive. It was felt that orientation, better facilities and a variety of budget accommodation would mean more people see Arrochar as a destination.

- People are keen to see more jobs created in the area with ‘living wages’ to give young people opportunity to stay in the area.

- Arrochar and Tarbet have a rich, interesting, heritage that should live on in learning and education and can be a key part of creating an identity for the area that attracts the interest of visitors.

- There will need to be a continuing availability of homes for young families and first time buyers, and for elderly people who need care and accessibility.

Railway line
Views to the water

Current development is predominantly north of the A83/A82 - this is all residential.
Tarbet pier is the village’s key asset and there is generous green amenity space from which to enjoy the lochside setting.

Trunk roads diverge at Tarbet, creating the impression of a junction rather than a village.

The ‘Three Villages’ can be viewed spatially as a cluster of settlements that needs a clear strategy for how they can support each other and be better connected.

Arrochar and Tarbet both seem to lack recognisable ‘village centres’ without a clear feeling of arrival or a sense of place for both their local communities and passing visitors.

Succoth provides a complementary role for housing that can be enhanced by establishing it as village with its own centre.

All Three Villages are uniquely positioned, in extraordinary landscape settings, to capture much more from passing visitors to ensure their long term sustainability as rural communities.

Tarbet and Arrochar can work as a pair of interrelated “gateways” that can support and enhance each other.

The isthmus that connects them is the transition point between the expanse of the inland waterway of Loch Lomond and the sea lochs and alpine mountain landscape to the west.
All Three Villages need to discover a physical heart that will become the social heart of their communities, and a draw for visitors, and become more connected.
Key Initiative - Path Connections

Existing options ...
Key Initiative

**Option 1:**
Steep climbs and slippy in wet weather, so not suitable for elderly and young children due to gradients.

**Option 2:**
Pavement along the A83 trunk road with a pinch point under the railway bridge, not deemed safe for children, would require improvement and pavement widening, but this is restricted by the width of the railway bridge.

**Option 3:**
Away from the road and with reasonable gradients, requires significant upgrade to the surface, it is a longer route which is discouraging for those wishing to get to school.

**Option for discussion:**
Improve/widen path along road side option 2 so that it can take cyclists; on the Arrochar side of the railway bridge, create a link from this to path 1 as it passes behind the railway station, using a gradual slope and maintaining appropriate width for pedestrians and cyclists. Allow safe crossing of the railway at the station. The aim of this is to improve the pedestrian and cycle link between the two villages, and also between the station and Arrochar, by avoiding the pinch point of the railway bridge.

**Recommendation:**
Test the feasibility of each of these options and prioritise it as a means of ensuring that the community and visitors can travel safely between Succoth, Arrochar and Tarbet.
The fact-finding workshop established that Arrochar needs to be more of a stopping place than a passing through place. It needs a centre, a focus and a heart. A place where the community gather, spend time and show off the best of what their village can offer. This is where visitors know that they have arrived in Arrochar, a small, active village in a stunning setting, which is the gateway to the Arrochar Alps.

This place should make the most of what is great and distinctive about the village; its setting, with the view of the loch and of the Cobbler. It should also acknowledge the real centre of gravity of the village, which is at the old pier and the Three Villages Hall.
Strategic Principles

- Key initiative: Development - Residential
- Key initiative: Visitor Economy Development

- Walking and cycling to Tarbet
- Walkway between Ben Arthur resort and Arrochar village centre
- Proposed Ben Arthur resort
- Key initiative: Key centre of village site

Arrochar
Key Initiatives

Arrochar needs a village centre

Arrochar is a village in a unique setting. Ben Arthur, (popularly known as The Cobbler), and the old pier are memorable parts of what makes Arrochar special, both for people who visit and people who live here. The village at the moment feels like it is in two halves. The northern half is linear, built along the road, and largely comprised of local businesses. The southern half begins with the Three Villages Hall and is made up of most of the homes in the village. There is a key place where all of these meet; the two halves of the village, the pier and the some of the best views of The Cobbler and the hills opposite. This site has been identified as part of the Charrette, and early sketches and ideas illustrate the potential for what the centre of the village might become in the future.
Key Initiatives

Early sketches

The Three Villages Hall
Mixed-use accommodation including potentially: heritage and interpretive use, food / retail and visitor accommodation

Heritage/interpretation space and/or public performance space

Improved loch frontage and public realm

Access from A83 into the village directly to central space (subject to dialogue with Transport Scotland)

The restored Old Pier

Viking long boat house

Trollstigen Norway

Reykjavik

Viking long boat house

Trollstigen Norway

Reykjavik
The site behind the Three Villages Hall was identified during the Charrette process as a critical site for the village. Conversations exploring how site might best serve the village have taken place as part of the Charrette process whilst acknowledging that there are emerging proposals from the landowner which have been the subject of pre-application discussions with the LLTNPA and community representatives.

The site presents a significant opportunity to create a key sense of arrival and a social heart for Arrochar, to encourage people to dwell, and spend more time and money in the village, rather than just pass through. This has a primary aim of enhancing the future economic wellbeing of the village but also has the wider benefit for the community of a high quality civic space that will reinforce the Three Villages Hall as social hub of the village.

The diagram opposite outlines strategic guidance for the site, illustrating some of the key strengths that should be optimised, and achieving balance between uses. This includes:

- The view of the loch, the old pier and The Cobbler is uniquely special to Arrochar and represents its most attractive feature to visitors. This should be the civic and social heart of the village for visitors and the community. A public space framing the view with buildings from deep within the site. It will be this view of the space from the trunk road, with The Cobbler in the background, that gives a special sense of arrival in Arrochar encouraging people to stop in the village.

- Buildings adjacent to the public space should have ground level uses that activate the space and support the local visitor economy as well as the local community, such as heritage and interpretation, outdoor equipment retail/repair/hire, cafe/restaurants and craft shops, with potential budget accommodation on upper floors.

- Any residential development should be of appropriate scale and density with higher elements pushed back toward the slope at the back of the site.
space for local business enterprise and visitor accommodation

‘postcard view’ the pier and The Cobbler

re-built pier with mooring space for a variety of boats

use of viking heritage to create identity and emphasise location and setting

civic space to sit, wander and enjoy the view and the sun (when it shines) for the community and visitors - summer event space for the three villages

What the space might feel like
Strategic Principles - Tarbet

Tarbet suffers from a combination of factors which have inhibited its development and the quality of its environment for a number of years, principally:

- It is a busy roadside location between two trunk roads with little public space and few possibilities for visitors to stop.
- There is no discernable village centre for the community or visitors.
- The railway station is remote.
- There has been asymmetrical development to the west, along the road to Arrochar, due to limited land supply.

The proposals on the following pages present strategic responses to these issues which should inform, and be used to co-ordinate, emerging masterplan proposals for the village.

- Tarbet needs a central, pedestrian friendly space, to avoid feeling like a junction of two roads, with small local businesses such as cafes and shops.
- Re-aligning the road west would create a better pedestrian space alongside the Tarbet Hotel and a safer crossing to the lochside park.
- Sensitively designed residential development on the south side of the A83 can balance historic growth on the north. This should form a street frontage to the road edge with lower density within woodland to the south.
- More can be made of the lochside park with potential for improving access to the loch.

The key next step for Tarbet is for local landowners and stakeholders to create a shared and co-ordinated masterplan approach to secure the best future for the place and the community.

Potential Option A for the future of Tarbet
Create mixed use residential and small business spaces in the village, to achieve the following:
- Enclosure on both sides of the road, to create an environment that is more ‘village’ in character
- Slow through traffic
- Create a central village space that is linked to the lochside park
- Sensitively design small scale low density housing into the hillside toward the south

Potential Option B for the future of Tarbet
Follow the same principles as outlined above, and also re-align the road to create a more generous centre of the village space, more pedestrian space around the Tarbet Hotel and a safer means of crossing the trunk road junction at Tarbet.
enhance lochside park and access to the water

create a new village centre to the west of the Tarbet Hotel by forming a civic space for the community and visitors that is linked to the lochside park

create definition north and south of the lochside park

encourage development to the southside of the A83 to redress the asymmetrical growth of the village due to land availability - grow this out from the village centre with a defined street frontage to the A83 with lower density visitor accommodation to the south, with appropriate access off the trunk road developed in discussion with Transport Scotland

improve connections to station

defined street frontage to road to strengthen village character

define street frontage north and south of the lochside park
Conclusion

This document of the Charrette process presents a series of integrated placemaking initiatives and design recommendations that respond to current and predicted future issues affecting communities in the National Park.

These ideas and proposals seek to establish long terms visions and strategies for these communities based on analysis, consultation and discussion. An approach that puts community needs and wellbeing to the forefront of planning for the future.

The ideas, strategies and guidance which have been created by communities with the designers, and in collaboration with agency stakeholders, will establish potential options, both in terms of strategy and potential sites for the future stages of the Local Development Plan. This report is central to the preparation of the LDP and it should be noted that the LLTNPA have further work to do, to look at quantifying the need and demand for any additional development land as well as the the infrastructure implications. In so doing this will enrich the LDP process with a clear vision for the future that should inform and guide all future development.

It is hoped that the Charrette process may also have more immediate benefits by helping to articulate common visions for the future of these places that encapsulate the communities' concerns and aspirations in a way that can stimulate local community action planning. A shared vision that can inform applications for community funding and the co-ordination of agency actions and expenditure in the formulation of strategies so that there is common understanding of local priorities and a shared long term goal.
