SECTION 5 – CONCLUSIONS

SECTION 5 - CONCLUSIONS

Appendix A: Detailed Matrix of the Key Elements of the Plan and Reasons for Screening Out
Section 1 - Introduction

This document represents the Habitats Regulations Appraisal (HRA) of the Loch Lomond & The Trossachs National Park Outdoor Recreation Plan 2019-2023 (the Plan).

The Conservation (Natural Habitats, & c.) Regulations 1994 require that certain plans which are likely to have a significant effect on a European site must be subject to an ‘Appropriate Assessment’ by the plan-making authority. The process for determining whether an appropriate assessment is required, together with the appropriate assessment itself – is known as the Habitats Regulations Appraisal.

European sites are Special Protection Areas (SPAs) designated under the EC Birds Directive to protect wild birds and Special Areas of Conservation (SACs) designated under the EC Habitats Directive to protect particular habitats and non-bird species.

Article 6(3) of the EC Habitats Directive requires that any plan (or project) which is not directly connected with or necessary to the management of a European Site, but would be likely to have a significant effect on such a site, either individually or in combination with other plans or projects, shall be subject to an “Appropriate Assessment” of its implications for the European Site in view of the site’s conservation objectives. This procedure is applied in Scotland through The Conservation (Natural Habitats, &c.) Regulations 1994 (as amended), and is known as the “Habitats Regulations Appraisal” of plans. A recent judgement in the EU Court of Justice (C-323/17) has ruled that it is not appropriate, at the screening stage, to take account of measures intended to avoid or reduce the harmful effects of a plan or project on a European Site. As a consequence, mitigation measures have not been taken into account at the screening stage in this HRA.

HRA is mandatory and where an Appropriate Assessment is required, plan-making bodies may not usually adopt the plan, unless the assessment concludes that the plan would not adversely affect the integrity of the site. Scottish Natural Heritage (SNH) must be consulted as part of any appropriate assessment.

SNH guidance ‘Habitats Regulations Appraisal of Plans, Guidance for Plan-making Bodies in Scotland’ (Version 3, January 2015), provides detailed guidance on the separate stages of carrying out an appraisal, and the considerations that will need to be taken into account. SNH have been informally consulted during the preparation of this HRA and will be formally consulted during the consultation process to ensure that they agree with the conclusions of the HRA.
Section 2 – Outdoor Recreation Plan - Context

Loch Lomond & The Trossachs National Park is an amazing place. Its wonderfully varied landscapes combined with its proximity and accessibility to such large proportion of Scotland’s population make it the ideal place for people to get outdoors and connect with nature.

There are a huge range of benefits that this can bring, from one person’s first outdoor adventure opening them up to a lifelong love of the outdoors, to playing a major part in the National efforts to make Scotland a healthier, greener nation.

Building on the National Park’s previous Outdoor Recreation Plan this plan sets out our ambitions for supporting and improving recreation opportunities for everyone, tackling the Global Climate Emergency through supporting a further shift towards active travel and improving people’s health and well-being by getting outside into nature.

Great strides have already been made in these areas in recent years. This plan will not only build on those successes but learn from previous experience to test and learn new innovative approaches to establish the National Park as a model of best practice.

Making it happen
This plan maps out the areas of focus and guiding principles which can guide our work over the next 3 years to deliver the vision of the National Park Partnership Plan around recreation and active and sustainable lifestyles and experiences for all.

Why do we need one?
This plan guides the work of the many organisations and partners with an interest in recreation and active, sustainable lifestyles so that a coherent and co-ordinated approach can be taken which best delivers an accessible, active and sustainable home and destination for all those who wish to enjoy The National Parks special landscape.

The unique position of the National Park offers opportunities to bring partners together to innovate and deliver ambitious work which can set examples to others and inspire the millions of visitors who enjoy this special place.

Main Objectives of the National Park Outdoor Recreation Plan

There is wide consensus amongst stakeholders that the National Policy documents are now largely in place that recognise the value of outdoor recreation and activity under three main themes; improving health and well-being, supporting low-carbon lifestyles as we address a climate emergency, and economic benefits through tourism.

Working from this broad base this plan intends to take specific elements from all of the varying policy documents and holistically bring the priority aspects in each into the focused area of the National Park to show how the various policies around health and wealth being, climate change, cycling, walking and tourism can come together to provide a coherent programme.

There are six strategic themes:

1. A Park for All.
2. Active and Vibrant Places.
3. Coasts and Water.
The Plan highlights six main themes each with a vision and identified priority initiatives that will help the National Park deliver its strategic objectives.

The Plan contains one strategic map showing a schematic spatial representation of the vision. It is very high level and doesn’t show the detail of the initiatives only broad indications where the focus of each strategic theme will be focussed.

Section 3 - Habitats Regulations Appraisal Methodology

European Sites considered

The Plan covers the geographical extent of the National Park. However, given the proximity of a number of European sites outside the National Park, a number of additional sites outwith the National Park boundary were included in the initial consideration. A list of the European sites that should be considered in the appraisal was identified (Table 1). These sites are based on the most up to date designations as of September 2019. GIS maps were used to determine the location of sites outside the boundary of the National Park and their potential to be affected by the Plan. Relevant factors were considered such as; the type and scale of actions promoted in the Plan, the qualifying interests of the European sites and their proximity to the National Park boundary.

There is one Ramsar site within the plan area that overlaps with the Loch Lomond SPA and the Loch Lomond Woods SAC. In line with Scottish Government policy, the wintering Greenland white-fronted goose interest of the Loch Lomond Ramsar site is safeguarded through the assessment of effects on the overlapping Loch Lomond SPA in this HRA. Impacts on the wider biodiversity interests of the Ramsar site are considered as part of the assessment of effects on the notified interests of the Endrick Mouth and Islands SSSI in the Plan.

**Information on European Sites**

*Ben Heasgarnich SAC*

Name of European Site: Ben Heasgarnich  
Site Type: Special Area of Conservation

Qualifying Interests:
- Base-rich fens (Alkaline fens)
- Alpine and subalpine calcareous grasslands
- High-altitude plant communities associated with areas of water seepage* (Alpine pioneer formations of the Caricion bicoloris-atrofuscace*)
- Plants in crevices on base-rich rocks (Calcareous rocky slopes with chasmophytic vegetation)
- Tall herb communities (Hydrophilous tall herb fringe communities of plains) and of the montane to alpine levels
- Montane acid grasslands (Siliceous alpine and boreal grasslands)
- Plants in crevices on acid rocks (Siliceous rocky slopes with chasmophytic vegetation)
- Species-rich grassland with mat-grass in upland areas (Species-rich Nardus grassland, on siliceous substrates in mountain areas (and submountain areas in continental Europe*))
- Mountain willow scrub (Sub-Arctic Salix spp. Scrub)

Conservation Objectives:
To avoid deterioration of the qualifying **habitats** (listed above) thus ensuring that the integrity of the site is maintained and the site makes an appropriate contribution to achieving favourable conservation status for each of the qualifying features; and 
To ensure for the qualifying habitats that the following are maintained in the long term:
• Extent of the habitat on site
• Distribution of the habitat within site
• Structure and function of the habitat
• Processes supporting the habitat
• Distribution of typical species of the habitat
• Viability of typical species as components of the habitat
• No significant disturbance of typical species of the habitat

* Indicates priority habitat

Loch Lomond Woods SAC

Name of European Site: Loch Lomond Woods
Site Type: Special Area of Conservation

Qualifying Interest(s):
• Western acidic oak woodland (Old sessile oak woods with Ilex and Blechnum in the British isles)
• Otter (Lutra lutra)

Conservation Objectives:
To avoid deterioration of the qualifying habitat (listed above) thus ensuring that the integrity of the site is maintained and the site makes an appropriate contribution to achieving favourable conservation status for each of the qualifying features; and
To ensure for the qualifying habitat that the following are maintained in the long term:
• Extent of the habitat on site
• Distribution of the habitat within site
• Structure and function of the habitat
• Processes supporting the habitat
• Distribution of typical species of the habitat
• Viability of typical species as components of the habitat
• No significant disturbance of typical species of the habitat

To avoid deterioration of the habitats of the qualifying species (listed above) or significant disturbance to the qualifying species, thus ensuring that the integrity of the site is maintained and the site makes an appropriate contribution to achieving favourable conservation status for each of the qualifying features; and
To ensure for the qualifying species that the following are maintained in the long term:
• Population of the species as a viable component of the site
Distribution of the species within site
Distribution and extent of habitats supporting the species
Structure, function and supporting processes of habitats supporting the species
No significant disturbance of the species

The site overlaps with Loch Lomond Special Protection Area

Endrick Water SAC

<table>
<thead>
<tr>
<th>Name of European Site: Endrick Water</th>

</tr>
<tr>
<td>• River lamprey (Lampetra fluviatilis)</td>
</tr>
<tr>
<td>• Brook lamprey (Lampetra planeri)</td>
</tr>
<tr>
<td>• Atlantic salmon (Salmo salar)</td>
</tr>
</tbody>
</table>

Conservation Objectives:
To avoid deterioration of the habitats of the qualifying species (listed above) or significant disturbance to the qualifying species, thus ensuring that the integrity of the site is maintained and the site makes an appropriate contribution to achieving favourable conservation status for each of the qualifying features; and
To ensure for the qualifying species that the following are maintained in the long term:
• Population of the species, including range of genetic types for salmon, as a viable component of the site
• Distribution of the species within site
• Distribution and extent of habitats supporting the species
• Structure, function and supporting processes of habitats supporting the species
• No significant disturbance of the species

The site overlaps with Loch Lomond Special Protection Area
Trossachs Woods SAC

Name of European Site: Trossachs Woods
Site Type: Special Area of Conservation
Qualifying Interest(s):
  - Western acidic oak woodland (Old sessile oak woods with Ilex and Blechnum in the British Isles)
Conservation Objectives:
  To avoid deterioration of the qualifying habitat (listed above) thus ensuring that the integrity of the site is maintained and the site makes an appropriate contribution to achieving favourable conservation status for each of the qualifying features; and
  To ensure for the qualifying habitat that the following are maintained in the long term:
    - Extent of the habitat on site
    - Distribution of the habitat within site
    - Structure and function of the habitat
    - Processes supporting the habitat
    - Distribution of typical species of the habitat
    - Viability of typical species as components of the habitat
    - No significant disturbance of typical species of the habitat
Name of European Site: Ben Lui

Site Type: Special Area of Conservation

Qualifying Interest(s):

- Base-rich fens (Alkaline fens)
- Alpine and subalpine calcareous grasslands
- High-altitude plant communities associated with areas of water seepage* (Alpine pioneer formations of the Caricion bicoloris-atrofuscae*)
- Plants in crevices on base-rich rocks (Calcareous rocky slopes with chasmophytic vegetation)
- Tall herb communities (Hydrophilous tall herb fringe communities of plains and of the montane to alpine levels)
- Wet heathland with cross-leaved heath (Northern Atlantic wet heaths with Erica tetralix)
- Montane acid grasslands (Siliceous alpine and boreal grasslands)
- Plants in crevices on acid rocks (Siliceous rocky slopes with chasmophytic vegetation)
- Acidic scree (Siliceous scree of the montane to snow levels (Androsacetalia alpinae and Galeopsietalia ladani))
- Species-rich grassland with mat-grass in upland areas (Species-rich Nardus grassland, on siliceous substrates in mountain areas (and submountain areas in continental Europe)*)
- Mountain willow scrub (Sub-Arctic Salix spp. Scrub)

Conservation Objectives:

To avoid deterioration of the qualifying habitats (listed above) thus ensuring that the integrity of the site is maintained and the site makes an appropriate contribution to achieving favourable conservation status for each of the qualifying features; and to ensure for the qualifying habitats that the following are maintained in the long term:

- Extent of the habitat on site
- Distribution of the habitat within site
- Structure and function of the habitat
- Processes supporting the habitat
- Distribution of typical species of the habitat
- Viability of typical species as components of the habitat
Name of European Site: Meall na Samnha
Site Type: Special Area of Conservation
Qualifying Interest(s):

Habitats:
- Alpine and subalpine calcareous grasslands
- Plants in crevices on base-rich rocks (Calcareous rocky slopes with chasmophytic vegetation)
- Tall herb communities (Hydrophilous tall herb fringe communities of plains and of the montane to alpine levels)
- Montane acid grasslands (Siliceous alpine and boreal grasslands)
- Species-rich grassland with mat-grass in upland areas (Species-rich Nardus grassland, on siliceous substrates in mountain areas and submountain areas in continental Europe**)
- Mountain willow scrub (Sub-Arctic Salix spp. Scrub)

Conservation Objectives:
To avoid deterioration of the qualifying habitats (listed above) thus ensuring that the integrity of the site is maintained and the site makes an appropriate contribution to achieving favourable conservation status for each of the qualifying features; and

To ensure for the qualifying habitats that the following are maintained in the long term:
- Extent of the habitat on site
- Distribution of the habitat within site
- Structure and function of the habitat
- Processes supporting the habitat
- Distribution of typical species of the habitat
- Viability of typical species as components of the habitat
- No significant disturbance of typical species of the habitat
* Indicates priority habitat
Name of European Site: River Tay
Site Type: Special Area of Conservation

Qualifying Interest(s):
- River lamprey (Lampetra fluviatilis)
- Brook lamprey (Lampetra planeri)
- Sea lamprey (Petromyzon marinus)
- Atlantic salmon (Salmo salar)
- Otter (Lutra lutra)
- Clear-water lakes or lochs with aquatic vegetation and poor to moderate nutrient levels (Oligotrophic to mesotrophic standing waters with vegetation of the *Littorelletea uniflorae* and/or of the *Isoëto-Nanojuncetea*)

Conservation Objectives:

**Habitat** - To avoid deterioration of the qualifying habitat (listed above) thus ensuring that the integrity of the site is maintained and the site makes an appropriate contribution to achieving favourable conservation status for each of the qualifying features; and to ensure for the qualifying habitat that the following are maintained in the long term:
- Extent of the habitat on site
- Distribution of the habitat within site
- Structure and function of the habitat
- Processes supporting the habitat
- Distribution of typical species of the habitat
- Viability of typical species as components of the habitat
- No significant disturbance of typical species of the habitat

**Species** - To avoid deterioration of the habitats of the qualifying species (listed above) or significant disturbance to the qualifying species, thus ensuring that the integrity of the site is maintained and the site makes an appropriate contribution to achieving favourable conservation status for each of the qualifying features; and to ensure for the qualifying species that the following are maintained in the long term:
- Population of the species, including range of genetic types for salmon, as a viable component of the site
- Distribution of the species within site
- Distribution and extent of habitats supporting the species
- Structure, function and supporting processes of habitats supporting the species
- No significant disturbance of the species

**Name of European Site: Firth of Tay and Eden Estuary**

**Site Type: Special Protection Area**

**Site description:**

Qualifying interest(s):

- Bar-tailed godwit (*Limosa lapponica*) (internationally important wintering population)
- Redshank (*Tringa totanus*) (internationally important wintering population)
- Little tern (*Sternula albifrons*) (Nationally important breeding populations)
- Marsh harrier (*Circus aeruginosus*) (Nationally important breeding populations)

Supporting in winter over 20,000 waterfowl including:

- Black-tailed godwit (*Limosa limosa islandica*)*
- Common scoter (*Melanitta nigra*)*
- Cormorant (*Phalacrocorax carbo*)*
- Dunlin (*Calidris alpina alpina*)*
- Eider (*Somateria mollissima*)*
- Goldeneye (*Bucephala clangula*)*
- Goosander (*Mergus merganser*)*
- Grey plover (*Pluvialis squatarola*)*
- Greylag goose (*Anser anser*)
- Long-tailed duck (*Clangula hyemalis*)*
- Oystercatcher (*Haematopus ostralegus*)*
- Pink-footed goose (*Anser brachyrhynchus*)
- Red-breasted merganser (*Mergus serrator*)*
- Sanderling (*Calidris alba*)*
- Shelduck (*Tadorna tadorna*)
- Velvet scoter (*Melanitta fusca*)*
- Waterfowl Assemblage

**Conservation Objectives:**

Habitats - To avoid deterioration of the habitats of the qualifying species (listed above) or significant disturbance to the qualifying species, thus ensuring that the integrity of the site is maintained; and to ensure for the qualifying species that the following are maintained in the long term:

- Population of the species as a viable component of the site
- Distribution of the species within site
- Distribution and extent of habitats supporting the species
- Structure, function and supporting processes of habitats supporting the species
- No significant disturbance of the species

*Indicates assemblage qualifier only
Name of European Site: Firth of Tay and Eden Estuary
Site Type: Special Area of Conservation

Qualifying Interest(s):

Habitats
- Estuaries
- Mudflats and sandflats not covered by seawater at low tide
- Sandbanks which are slightly covered by sea water all the time

Species
- Common seal (Phoca vitulina)

Conservation Objectives:

Habitats - To avoid deterioration of the qualifying habitats (listed above) thus ensuring that the integrity of the site is maintained and the site makes an appropriate contribution to achieving favourable conservation status for each of the qualifying features; and to ensure for the qualifying habitats that the following are maintained in the long term:
  - Extent of the habitat on site
  - Distribution of the habitat within site
  - Structure and function of the habitat
  - Processes supporting the habitat
  - Distribution of typical species of the habitat
  - Viability of typical species as components of the habitat
  - No significant disturbance of typical species of the habitat

Species - To avoid deterioration of the habitats of the qualifying species (listed above) or significant disturbance to the qualifying species, thus ensuring that the integrity of the site is maintained and the site makes an appropriate contribution to achieving favourable conservation status for each of the qualifying features; and to ensure for the qualifying species that the following are maintained in the long term:
  - Population of the species as a viable component of the site
  - Distribution of the species within site
  - Distribution and extent of habitats supporting the species
  - Structure, function and supporting processes of habitats supporting the species
  - No significant disturbance of the species

The site overlaps with Firth of Tay & Eden Estuary Special Protection Area.
**Name of European Site: Firth of Forth (SPA)**

**Site Type:** Special Protection Area

**Site description:**

**Qualifying interest(s):**

- Bar-tailed godwit (*Limosa lapponica*) (European Importance)
- Golden plover (*Pluvialis apricaria*) (European Importance)
- Red-throated diver (*Gavia stellata*) (European Importance)
- Slavonian grebe (*Podiceps auritus*) (European Importance)
- Knot (*Calidris canutus*) (Wintering populations)
- Pink-footed goose (*Anser brachyrhynchus*) (Wintering populations)
- Redshank (*Tringa totanus*) (Wintering populations)
- Shelduck (*Tadorna tadorna*) (Wintering populations)
- Turnstone (*Arenaria interpres*) (Wintering populations)
- Sandwich tern (*Sterna sandvicensis*) (Post-breeding (passage) population)

**Wintering waterfowl assemblage including 15 migratory species:**

- Common scoter (*Melanitta nigra*)
- Cormorant (*Phalacrocorax carbo*)
- Curlew (*Numenius arquata*)
- Dunlin (*Calidris alpina alpina*)
- Eider (*Somateria mollissima*)
- Goldeneye (*Bucephala clangula*)
- Great crested grebe (*Podiceps cristatus*)
- Grey plover (*Pluvialis squatarola*)
- Lapwing (*Vanellus vanellus*)
- Long-tailed duck (*Clangula hyemalis*)
- Mallard (*Anas platyrhynchos*)
- Oystercatcher (*Haematopus o)**
- Red-breasted merganser (*Mergus serrator*)
- Ringed plover (*Charadrius hiaticula*)
- Scaup (*Aythya marila*)
- Velvet scoter (*Melanitta fusca*)
- Wigeon (*Anas penelope*)
Conservation Objectives:

To avoid deterioration of the habitats of the qualifying species (listed above) or significant disturbance to the qualifying species, thus ensuring that the integrity of the site is maintained; and

To ensure for the qualifying species that the following are maintained in the long term:

- Population of the species as a viable component of the site
- Distribution of the species within site
- Distribution and extent of habitats supporting the species
- Structure, function and supporting processes of habitats supporting the species
- No significant disturbance of the species

*indicates assemblage qualifier only
**Forth Islands SPA**

**Name of European Site:** Forth Islands (SPA)  
**Site Type:** Special Protection Areas  

**Site Description:**  
Forth Islands SPA consists of a series of islands supporting the main seabird colonies in the Firth of Forth. The seaward extension extends approximately 2 km into the marine environment to include the seabed, water column and surface.

**Qualifying Interest(s)**  
- Arctic tern (Sterna paradisaea)  
- Common tern (Sterna hirundo)  
- Cormorant (Phalacrocorax carbo)*  
- Gannet (Morus bassanus)  
- Guillemot (Uria aalge)*  
- Herring gull (Larus argentatus)*  
- Kittiwake (Rissa tridactyla)*  
- Lesser black-backed gull (Larus fuscus)  
- Puffin (Fratercula arctica)  
- Razorbill (Alca torda)* (nationally important populations)  
- Roseate tern (Sterna dougallii)  
- Sandwich tern (Sterna sandvicensis)  
- Shag (Phalacrocorax aristotelis)  
- Seabird assemblage

* indicates assemblage qualifier only  

**The site overlaps with Isle of May Special Area of Conservation.**

**Conservation Objectives:**  
To avoid deterioration of the habitats of the qualifying species (listed above) or significant disturbance to the qualifying species, thus ensuring that the integrity of the site is maintained; and  
To ensure for the qualifying species that the following are maintained in the long term:  
- Population of the species as a viable component of the site  
- Distribution of the species within site  
- Distribution and extent of habitats supporting the species  
- Structure, function and supporting processes of habitats supporting the species  
- No significant disturbance of the species
Inner Clyde SPA

Name of European Site: Inner Clyde
Site Type: Special Protection Area
Site Description:
The Inner Clyde SPA contains extensive intertidal flats which support large numbers of wintering waterfowl.
Qualifying Interest:
- Redshank (Tringa totanus) (wintering population)

Conservation Objectives:
To avoid deterioration of the habitats of the qualifying species (listed above) or significant disturbance to the qualifying species, thus ensuring that the integrity of the site is maintained; and
To ensure for the qualifying species that the following are maintained in the long term:
- Population of the species as a viable component of the site
- Distribution of the species within site
- Distribution and extent of habitats supporting the species
- Structure, function and supporting processes of habitats supporting the species
- No significant disturbance of the species
### Glen Etive and Glen Fyne SPA

**Name of European Site:** Glen Etive and Glen Fyne

**Site Type:** Special Protection Area

**Site Description:**
Glen Etive and Glen Fyne Special Protection Area (SPA) is a large, predominantly upland site that rises from sea level to over 1100 m and encompasses a diverse range of habitats including heather moorland, rough grassland, blanket bog, native woodland, montane heaths and exposed rock and scree. There are also numerous freshwater lochs and river systems.

**Qualifying Interest:**
- Supports a population golden eagle Aquila chrysaetos.

**Conservation Objectives**
- To avoid deterioration of the habitats of the qualifying species (listed above) or significant disturbance to the qualifying species, thus ensuring that the integrity of the site is maintained; and
- To ensure for the qualifying species that the following are maintained in the long term:
  - Population of the species as a viable component of the site
  - Distribution of the species within site
  - Distribution and extent of habitats supporting the species
  - Structure, function and supporting processes of habitats
  - Supporting the species
  - No significant disturbance of the species

---

This site overlaps with the following Special Areas of Conservation (SAC): Ben Lui, Glen Coe, Glen Creran Woods, Loch Etive Woods, Loch Lomond Woods, Rannoch Moor, River Tay and Glen Shira & also overlaps with Rannoch Lochs Special Protection Area (SPA).
European sites scoped out

Six European sites outside the National Park boundary were scoped out of the HRA as there will be “No Likely Significant Effect” on these sites as a consequence of the Plan. Further details of the sites and the reasons they have been scoped out of the assessment can be found in Table 2 below.

Table 2: European Sites Scoped Out of the Appraisal

<table>
<thead>
<tr>
<th>European Site</th>
<th>Reason for Scoping Out (1)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Ben Lawers SAC</td>
<td>The SAC lies around 2.5km north of the National Park boundary. Given the separation distance between the National Park and the SAC, any access promoted by the Plan will not give rise to a likely significant effect on the qualifying interests of the SAC.</td>
</tr>
<tr>
<td>Flanders Mosses SAC</td>
<td>Although part of the SAC lies adjacent to the National Park boundary, there is no possibility of downstream effects on the SAC as the active and degraded raised bog qualifying interests of the site are ombrotrophic (rain-fed) and will have no connectivity with any access promoted projects in the Plan.</td>
</tr>
<tr>
<td>Firth of Tay and Eden Estuary SPA</td>
<td>The estuary is too far downstream of the National Park to be affected by any changes in water quality as a result of any project promoted by the Plan. In addition, the River Tay SAC lies upstream of this site and any potential impacts on water quality are assessed through consideration of the River Tay SAC in this HRA.</td>
</tr>
<tr>
<td>Firth of Tay and Eden Estuary SAC</td>
<td>The estuary is too far downstream of the National Park to be affected by any changes in water quality as a result of any projects promoted by the Plan. In addition, the River Tay SAC lies upstream of this site and any potential impacts on water quality are assessed through consideration of the River Tay SAC in this HRA.</td>
</tr>
<tr>
<td>Firth of Forth SPA</td>
<td>The estuary is too far downstream of the National Park to be affected by any changes in water quality as a result of initiatives promoted by the Plan. In addition, the River Teith SAC lies upstream of this site and any potential impacts on water quality are assessed through consideration of the River Teith SAC in this HRA.</td>
</tr>
<tr>
<td>Forth Islands SPA</td>
<td>The islands are too far downstream of the National Park and with too strong a maritime influence to be affected by any changes in water quality as a result of initiatives promoted by the Plan. In addition, the River Teith SAC lies upstream of this site and any potential impacts on water quality are assessed through consideration of the River Teith SAC in this HRA.</td>
</tr>
</tbody>
</table>
Section 4 - Screening the National Park Outdoor Recreation Plan

Having gathered information on the European sites potentially affected by the National Park Outdoor Recreation Plan as set out in Table 1, the screening process, as set out in the SNH guidance, has been followed:

Table 3: SNH Guidance - Screening Steps

<table>
<thead>
<tr>
<th>Step 1</th>
<th>Screening out general policy statements</th>
</tr>
</thead>
<tbody>
<tr>
<td>Step 2</td>
<td>Screening out projects referred to in, but not proposed by the Plan</td>
</tr>
<tr>
<td></td>
<td>- These could be projects that are to be delivered as part of national infrastructure and promoted by national government and where the plan will play no part in its delivery or are subject to consent directly from Scottish Ministers.</td>
</tr>
<tr>
<td>Step 3</td>
<td>Screening out aspects of the Plan that could have no likely significant effect on a site alone</td>
</tr>
<tr>
<td></td>
<td>a) Because they are intended to protect the natural environment</td>
</tr>
<tr>
<td></td>
<td>b) This will not themselves lead to development or other change because they relate to design or other qualitative criteria</td>
</tr>
<tr>
<td></td>
<td>c) Which make provision for change but could have no conceivable effect on a European site, e.g. because there is no link or pathway or any effects would be positive or would not otherwise undermine the conservation objectives of the site;</td>
</tr>
<tr>
<td></td>
<td>d) Which make a provision for change but which could have no significant effect (and hence a minor residual effect) on a European site because any potential effects would be insignificant, being so restricted or remote from the site that they would not undermine the conservation objectives for the site.</td>
</tr>
<tr>
<td></td>
<td>e) For which the effects on any particular European Site cannot be identified because the proposal is too general, for example, it is not known where or when or how the proposal will be implemented or where effects may occur or where sites if any may be effected.</td>
</tr>
</tbody>
</table>

Step 1-3: The screening process of the draft Plan has therefore included a record of outcomes/actions that are not likely to have a significant effect on a European Site.

</tbody>
</table>
The above Table 4 screens out all of the key elements of the Plan that will not individually have a likely significant effect on a European site.

**Consideration of likely significant effects in combination with other relevant Plans or Projects**

The ‘in combination effects’ of the Plan with other plans and projects has also been assessed. In line with SNH guidance, elements of the Plan that have individually been screened out because they will have no effect on a European site or because that element is too general in nature, do not require an in-combination assessment. This is also the case for those elements of the Plan that have been screened out because they are general policy statements. As a consequence, those elements of the Plan screened out in Table 4 did not form part of the in-combination assessment.

Table 5 below identifies the other plans and projects which have been considered.

**Table 5: Other Relevant Plans and Projects considered for ‘in combination’ effects**

<table>
<thead>
<tr>
<th>Other Relevant Plans / Projects</th>
<th>Key National Plans / Projects</th>
</tr>
</thead>
<tbody>
<tr>
<td>National Planning Framework</td>
<td>HRA undertaken. It guides the Local Development Plan. No policies or proposals identified that would have ‘in combination’ effects with proposals within the Plan.</td>
</tr>
<tr>
<td>River Basin Management Plans</td>
<td>HRA undertaken. Will improve river SACs. No de minimis/minor residual effects identified.</td>
</tr>
<tr>
<td>UK Biodiversity Action Plan</td>
<td>Guides habitat and species management, benefitting European sites.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Local Development Plans</th>
<th>HRA was undertaken. The majority of policies and proposals identified would have no ‘in combination’ effects.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Argyll and Bute; Stirling; West Dunbartonshire ; Perth and Kinross</td>
<td>HRA was undertaken. The majority of policies and proposals identified would have no ‘in combination’ effects.</td>

<td>Local Development Plan ‘LIVE Park’</td>
<td>HRA was undertaken. The policies and proposals identified would have no ‘in combination’ effects.</td>
</tr>
<tr>
<td>Biodiversity Action Plan ‘Wild Park’</td>
<td>HRA not undertaken. Wild Park is a delivery mechanism for the conservation objectives and policies identified in the 2012-2017 and 2018-2023 National Park Partnership Plans. Both plans have been subject to HRA and no likelihood of significant effects on any European sites was identified.</td>
</tr>
<tr>
<td>Your Park ‘Camping Development Plan’</td>
<td>HRA not undertaken as a strategic plan, projects not detailed enough.</td>
</tr>
</tbody>
</table>
Core Paths Plan | HRA not undertaken. It protects a network of paths throughout the Park. No effect on any European sites.
---|---
National Park Partnership Plan 2018-2023 | HRA undertaken and no part of the plan was likely to have a significant effect on any European site ‘alone’ or ‘in combination’.

**Transport Scotland projects not started**

| A82 Improvements: | This project will be assessed under the Habitats Regulations in terms of its impacts on any European site such as Loch Lomond Woods SAC. The route and design details are still to be finalised and therefore it cannot be considered in terms of potential in-combination effects. |
| Tarbet to Inverarnan Upgrade | |

The other relevant plans and projects listed above in Table 5 have been considered for ‘in combination’ effects and there are no likely significant in combination effects.

**Conclusion to screening**

5.5 The Habitats Regulations Appraisal process has followed the key stages in the SNH Guidance. The appraisal process identified that no part of the Outdoor Recreation Plan was likely to have a significant effect on any European site ‘alone’ or ‘in combination’. As a consequence, it can be safely concluded that the Outdoor Recreation Plan 2018-2023 will not adversely affect the integrity of any European Site. There are a couple of priority initiatives which reference locations; however, given the high level nature of the initiatives it isn’t possible to undertake a worthwhile assessment of possible impacts. Any initiatives progressing to delivery would require assessment at the project level and this is where more meaningful assessment can be undertaken. To ensure this takes place text has been added into the Outdoor Recreation Plan to highlight possible sensitivities with the plan stating “we are committed to ensuring that all locations are enjoyed within their limits of acceptable change and that promotion and celebration is appropriate and acknowledges landscape and habitat considerations.”
